

## CONSTRUCTION MANAGEMENT

### Program Overview

The Construction Management Program prepares students for careers as construction managers, building inspectors and cost estimators. Construction managers coordinate the activities of skilled workers, supervisors, suppliers and subcontractors. As inspectors and building officials, these professionals examine structures to ensure that standards are met.

Students can earn an associate's degree in Construction Management or a certificate in Construction Codes. In addition to the general education and core courses, the program incorporates preparatory work for professional certification tests. After completing the relevant courses,

the student is eligible to take the International Code Council Examinations.

The courses in this program are arranged in a sequence that provides optimal learning opportunities. Students are required to follow the integrated program sequence.

**The primary purpose of an Associate in Applied Science degree is to prepare students for employment. The AAS degree is not designed specifically for transfer; however, there are opportunities to apply some coursework or the whole degree to a bachelor's degree program. For more information, see an academic advisor and the department chair.**
