The test, open the foil pouch of the COVID-19 Test Card. Card in Pouch, the Tube pre-filled with the extraction solution is added to the test card.

1 Empty Tube and 2 Sealed Solution

Please confirm the liquid level with or above Edge 2, then go to Step 2 Collect Sample.

2 Collect Sample
a. Remove the swab from its package, being careful not to touch the tip of the swab. Please keep the swab package for later use.

b. Gently insert the entire absorbent tip of the swab into the empty tube. Then squeeze the sealed solution completely into the empty tube. Please confirm the liquid level with or above Edge 2, then go to Step 2 Collect Sample.

c. Squeeze the sides of the tube to express as much liquid as possible from the swab, and then remove the swab.

3 Process Sample
a. Tap the tube vertically on the table and twist the large orange cap, put the swab back into the package. Safely dispose of the swab and the package.

b. Insert the swab into the tube, touch the bottom of the tube with the swab tip, and stir at least 15 times.

c. Stir x15

Note: If you don’t squeeze the swab, there may not be sufficient sample material to perform the test properly (i.e., potentially resulting in a false negative result).

Note: With children, the maximum depth of insertion into the nostril may be less than 3/4 of an inch, and you may need to have a second person to hold the child’s head while swabbing.

c. Firmly and slowly brush against insides of nostril in a circular motion against the nasal wall at least 5 times. Take at least 15 seconds to collect the specimen and be sure to collect any nasal drainage on the swab. Using the same swab, repeat the same collection procedure for the other nostril. Be sure to brush BOTH nostrils with the SAME SWAB.

4 Add Sample
Test to open the small white cap of the tube. Add 3 drops of sample to the Sample Port of the COVID-19 Test Card. Screw back the large orange cap.

5 Wait 15 Minutes
Start the timer by clicking the “Start Timer” button on the App, immediately after adding sample to the Sample Port. The result will be ready in 15 minutes.

Note: Do not interpret your test result until after your 15-min timer has completed, as the T line may take as long as 15 minutes to appear.

6 Read Result
Results should not be read after 30 minutes (Result shown in 2x magnification).

Note: A false negative or false positive result may occur if the test result is read before 15 minutes or after 30 minutes.

7 Test Result Explanation
Positive Result

A POSITIVE result must show BOTH a C line and a T line. A positive result means that viral antigens from COVID-19 were detected and the individual is positive for COVID-19.

Below are photos of actual positive tests. Please note that the T line may be faint.

Note: The T line can be extremely faint.

Persons who test positive should self-isolate and seek follow up care with their physician or healthcare provider as additional testing and public health reporting may be necessary.

Negative Result

A NEGATIVE result will show ONLY a C line. A negative result means that viral antigens from COVID-19 were not detected and that the individual is presumed negative for COVID-19.

Note: Please note that negative results do not rule out COVID-19. In case of negative test result: Continue to follow all social distancing recommendations and take protective measures. If suspicions of infection persist and/or your first test result is negative, repeat the test after 1-2 days and consult your healthcare provider or local COVID-19 center.

• Note: A negative result is presumptive and confirmation with a molecular assay, if necessary, for patient management may be performed. Individuals without symptoms that test negative should be tested again with at least 24 hours and no more than 48 hours between tests. Additional confirmatory testing with a molecular test for negative results may be necessary after second negative result for asymptomatic patients, if there is a high likelihood of SARS-CoV-2 infection, such as in an individual with as close contact with COVID-19 or with suspected exposure to COVID-19 in communities with high prevalence of infection. Additional confirmatory testing with a molecular test for positive results may also be necessary, if there is low likelihood of SARS-CoV-2 infection, such as in individuals without known exposures to SARS-CoV-2 or residing in communities with low prevalence of infection.

Invalid Result
If there is NO LINE, or if there is ONLY a T line, the test is INVALID. Invalid result means that the test did not function correctly. You will need to retest with a new test kit. If upon retesting, the test result is still invalid, contact your doctor or local COVID-19 center. An invalid result does not indicate if the individual did or did not have COVID-19 and should be repeated.

3 Dispose the Test Kit
After test is completed, dispose the kit components in trash.

Report Test Result
Report the result following the App instructions or share your test result with your healthcare provider.

In the USA:

[1] The test is intended to be used as an aid in the clinical diagnosis of a current COVID-19 infection. Do not use the test as the only guide to manage your care.

[2] This product has not been FDA cleared or approved but has been authorized by FDA under an Emergency Use Authorization (EUA). The product has been authorized only for the detection of SARS-CoV-2 and not for any other viruses or pathogens. The emergency use of this product is only authorized for the duration of the authorization period and until further notice. The authorization is conditioned on the authorization of emergency use of in vitro diagnostic test for detection and/or diagnosis of COVID-19 under Section 564(b)(1) of the Federal Food, Drug and Cosmetic Act, 21 U.S.C. § 360bb-2, unless the decision is terminated or rescinded before it’s expiration.

iHealth®

COVID-19 Antigen Rapid Test Instruction for use

Model ICO-3000/ ICO-3001/ ICO-3002

This product has not been FDA cleared or approved, but has been authorized by FDA under an Emergency Use Authorization (EUA). Please read all the information in this instruction for use before performing the test.

For use with anterior nasal swab specimens. For In vitro Diagnosis (IVD) Use Only.

Download App & Open App
Scan the QR code to download the “iHealth COVID-19 Antigen Rapid Test” App through your smartphone (iOS12+) or Android (API 6+).

For a full list of compatible smartphone visit: https://ihealthlabs.com/pages/support-ICO3000

Register and Log into The App
Watch Video in App
Each step has a corresponding instructional video in the App. Watch the video and perform the test according to the instructions.

Step by Step Instructions

1 Prepare Materials
You may have in the package. Please

2 Collect Sample
a. Tap the tube vertically on the table and twist the large orange cap, put the swab back into the package. Safely dispose of the swab and the package.

b. Gently insert the entire absorbent tip of the swab (usually 1/2 to 3/4 of an inch) into your nostril.

Note: With children, the maximum depth of insertion into the nostril may be less than 3/4 of an inch, and you may need to have a second person to hold the child’s head while swabbing.

c. Firmly and slowly brush against insides of nostril in a circular motion against the nasal wall at least 5 times. Take at least 15 seconds to collect the specimen and be sure to collect any nasal drainage on the swab. Using the same swab, repeat the same collection procedure for the other nostril. Be sure to brush BOTH nostrils with the SAME SWAB.

3 Process Sample
a. Tap the tube vertically on the table and twist the large orange cap, put the swab back into the package. Safely dispose of the swab and the package.

b. Insert the swab into the tube, touch the bottom of the tube with the swab tip, and stir at least 15 times.

c. Stir x15

Note: If you don’t squeeze the swab, there may not be sufficient sample material to perform the test properly (i.e., potentially resulting in a false negative result).

Note: A false negative or false positive result may occur if too little sample is added to the test card.

Note: Failure to swab properly may cause false negative results.

4 Add Sample
Test to open the small white cap of the tube. Add 3 drops of sample to the Sample Port of the COVID-19 Test Card. Screw back the large orange cap.

5 Wait 15 Minutes
Start the timer by clicking the “Start Timer” button on the App, immediately after adding sample to the Sample Port. The result will be ready in 15 minutes.

Note: Do not interpret your test result until after your 15-min timer has completed, as the T line may take as long as 15 minutes to appear.

6 Read Result
Results should not be read after 30 minutes (Result shown in 2x magnification).

Note: A false negative or false positive result may occur if the test result is read before 15 minutes or after 30 minutes.

7 Test Result Explanation
Positive Result

A POSITIVE result must show BOTH a C line and a T line. A positive result means that viral antigens from COVID-19 were detected and the individual is positive for COVID-19.

Below are photos of actual positive tests. Please note that the T line may be faint.

Persons who test positive should self-isolate and seek follow up care with their physician or healthcare provider as additional testing and public health reporting may be necessary.

Negative Result

A NEGATIVE result will show ONLY a C line. A negative result means that viral antigens from COVID-19 were not detected and that the individual is presumed negative for COVID-19.

Note: Please note that negative results do not rule out COVID-19. In case of negative test result: Continue to follow all social distancing recommendations and take protective measures. If suspicions of infection persist and/or your first test result is negative, repeat the test after 1-2 days and consult your healthcare provider or local COVID-19 center.

• Note: A negative result is presumptive and confirmation with a molecular assay, if necessary, for patient management may be performed. Individuals without symptoms that test negative should be tested again with at least 24 hours and no more than 48 hours between tests. Additional confirmatory testing with a molecular test for negative results may be necessary after second negative result for asymptomatic patients, if there is a high likelihood of SARS-CoV-2 infection, such as in an individual with as close contact with COVID-19 or with suspected exposure to COVID-19 in communities with high prevalence of infection. Additional confirmatory testing with a molecular test for positive results may also be necessary, if there is low likelihood of SARS-CoV-2 infection, such as in individuals without known exposures to SARS-CoV-2 or residing in communities with low prevalence of infection.

Invalid Result
If there is NO LINE, or if there is ONLY a T line, the test is INVALID. Invalid result means that the test did not function correctly. You will need to retest with a new test kit. If upon retesting, the test result is still invalid, contact your doctor or local COVID-19 center. An invalid result does not indicate if the individual did or did not have COVID-19 and should be repeated.

3 Dispose the Test Kit
After test is completed, dispose the kit components in trash.

Report Test Result
Report the result following the App instructions or share your test result with your healthcare provider.

In the USA:

[1] The test is intended to be used as an aid in the clinical diagnosis of a current COVID-19 infection. Do not use the test as the only guide to manage your care.

The product has been authorized only for the detection of SARS-CoV-2 and not for any other viruses or pathogens. The emergency use of this product is only authorized for the duration of the authorization period and until further notice. The authorization is conditioned on the authorization of emergency use of in vitro diagnostic test for detection and/or diagnosis of COVID-19 under Section 564(b)(1) of the Federal Food, Drug and Cosmetic Act, 21 U.S.C. § 360bb-2, unless the decision is terminated or rescinded before it’s expiration.
iHealth COVID-19 Antigen Rapid Test

**INTENDED USE**

The iHealth COVID-19 Antigen Rapid Test is a lateral flow assay intended for the qualitative detection of nucleocapsid protein antigen from SARS-CoV-2. This test is authorized for non-prescription home use with self-collected anterior nasal (nares) swab samples from individuals aged 15 years or older, or adult collected anterior nasal (nares) swab samples from individuals aged 2 years or older, with or without symptoms or other epidemiological data to suspect COVID-19 when tested over three days with at least 24 hours (and no more than 48 hours) between tests.

The iHealth COVID-19 Antigen Rapid Test does not differentiate between SARS-CoV and SARS-CoV-2.

Results are for the identification of the SARS-CoV-2 nucleocapsid protein antigen. The antigen is generally detectable in anterior nasal swabs obtained during the acute phase of infection. Positive results indicate the presence of viral antigens, but clinical correlation with patient medical history and other diagnostic information is necessary to determine infection status. Positive results do not rule out bacterial infection or co-infection with other viral agents and may not be the definitive cause of disease. Individuals who test positive with the iHealth COVID-19 Antigen Rapid Test should self-isolate and seek follow-up care with their physician or healthcare provider as additional testing may be necessary.

Negative results are presumptive, do not rule out SARS-CoV-2 infection and should not be used as the sole basis for treatment or patient management decisions, including infection control decisions. Negative results should be considered in the context of an individual's recent exposures, history and the presence of clinical signs and symptoms consistent with COVID-19.

For serial testing programs, additional confirmatory testing with a molecular test for negative results may be necessary. If there is a high likelihood of SARS-CoV-2 infection, such as in an individual with a positive COVID-19 test result and symptoms consistent with COVID-19 or in communities with high prevalence of infection. Additional confirmatory testing with a molecular test for positive results may also be necessary, if there is a low likelihood of SARS-CoV-2 infection, such as in individuals without known exposures to SARS-CoV-2 residing in communities with low prevalence of infection.

Individuals who test negative and continue to experience COVID-19-like symptoms of fever, cough, and/ or shortness of breath may still have SARS-CoV-2 infection and should seek follow-up care with their physician or healthcare provider. Individuals should provide all results obtained with this product to their healthcare provider for public health reporting or by following the mobile application instructions for self-reporting. All results obtained with this product will report all test results they receive from individuals who use the authorized product to relevant public health authorities in accordance with state, local, and federal requirements using appropriate LONC and SNOMED codes, as defined by the Laboratory In Vitro Diagnostics (LVD) Test Code Mapping for SARS-CoV-2 Tests provided by CDC.

The iHealth COVID-19 Antigen Rapid Test is authorized for non-prescription home use with self-collected anterior nasal (nares) swab samples from individuals aged 15 years or older, or adult collected anterior nasal (nares) swab samples from individuals aged 2 years or older, with or without symptoms or other epidemiological data to suspect COVID-19 when tested over three days with at least 24 hours (and no more than 48 hours) between tests.

The iHealth COVID-19 Antigen Rapid Test is also authorized for non-prescription home use with self-collected anterior nasal (nares) swab samples from individuals aged 2 years or older, with or without symptoms or other epidemiological data to suspect COVID-19 when tested over three days with at least 24 hours (and no more than 48 hours) between tests.

The iHealth COVID-19 Antigen Rapid Test is only for use under the Food and Drug Administration’s Emergency Use Authorization.

FREQUENTLY ASKED QUESTIONS

Will this test hurt?

No, the nasal swab is not sharp and it should not hurt. Sometimes the swab can feel slightly uncomfortable or ticky. If you feel pain, please stop the test and seek advice from a healthcare provider.

What are the known and potential risks and benefits of this test?

Potential risks include:

- Possible discomfort during sample collection.
- Possible incorrect test results.

Potential benefits include:

- The results, along with other information, can help your healthcare provider make informed recommendations about your care.
- The results of this test may help limit the spread of COVID-19 to your family and others in your community.

What is serial testing?

Serial testing is when a single person is tested for COVID-19 more than once. Because antigen tests are less sensitive than other COVID-19 tests, false results may occur, repeated testing may be necessary to detect COVID-19 more reliably than a single test. By repeating testing, it may be possible to more quickly identify cases of COVID-19 and reduce false results. Additional testing with molecular COVID-19 test may be necessary, depending on your individual risk factor and test results.

It is important that you work with your healthcare provider to help you understand the next steps you should take. Serial testing (i.e., testing every day or every other day) is more likely to detect COVID-19, especially when you do not have any symptoms.

Serial testing (i.e., testing every day or every other day) is more likely to detect COVID-19, especially when you do not have any symptoms.

What is the difference between an antigen and molecular test?

An antigen test, such as the iHealth COVID-19 Antigen Rapid Test, detects proteins from the virus (also known as PCR tests) detect genetic material from the virus. Antigen tests are very specific for the virus, but not as sensitive as molecular tests. This means that a positive result is highly accurate, but a negative result does not rule out infection. If your test result is negative, you should discuss with your healthcare provider on whether an additional test is necessary and if you should continue isolating at home. There is a higher chance of false negative results with antigen tests than with laboratory-based molecular tests. This means that there is a higher chance this test will give you a negative result when you have a COVID-19.

How accurate is this test?

The iHealth COVID-19 Antigen Rapid Test was compared to an FDA authorized molecular SARS-CoV-2 test using fresh self-collected or parent/guardian collected anterior nasal (nares) swab samples as the reference method. The iHealth COVID-19 Antigen Rapid Test correctly identified 102 out of 104 (98.1%) of symptomatic positive samples and 33 out of 35 (94.3%) of symptomatic negative samples in this study. To obtain accurate results, the test must be performed within the first seven (7) days of symptom onset.

The reagent in the extraction liquid contains ProClin® 300 which may cause an allergic skin reaction in some people. If the solution makes contact with the skin or eye, wash/ flush with copious amounts of water. If skin irritation or rash occurs get medical advice/attention.

**STORAGE AND OPERATION CONDITIONS**

Store the test kits at room temperature between 36.8°F-100°F (2°C-38°C). Ensure all test components are at room temperature 65-85°F (18-30°C) before use. The shelf life of the iHealth COVID-19 Antigen Rapid Test is 9 months and it is stable before the expiration date marked on the packaging.

**HAZARDOUS INGREDIENTS FOR REAGENT SOLUTION**

The Reagent contains potentially harmful chemicals (see table below). If the solution contacts the skin or eye, flush with copious amounts of water. If irritation persists, seek medical advice.

**Chemical Name**

Proteinase K (H318)

**Harmful if swallowed (H302)**

Carcinogenicity (H351)

0.1%

**May cause skin irritation**

To obtain a positive result, the coronavirus causing COVID-19 must be present in detectable amounts in the sample. The test is not able to detect other coronaviruses or other viruses or bacteria.

- May cause skin irritation (H314)
- Causes severe skin burns and eye damage (H314)
- May cause skin irritation (H314)

Manufactured for Health Labs, Inc.

Made in China
Rev 03/2022

The product has not been FDA cleared or approved, but has been authorized by FDA under an Emergency Use Authorization (EUA).

Please read this instruction for use before using the test.

Use with anterior nasal swab specimen. For In Vitro Diagnostic (IVD) Use Only.

What if you test negative?

A negative test result indicates no antigens for COVID-19 were detected. If it is possible for this test to give a negative result that is incorrect (false negative) in some people with COVID-19, it may be possible to more quickly identify cases if you do not have any symptoms.

Serial testing (i.e., testing every day or every other day) is more likely to detect COVID-19, especially when you do not have any symptoms.

A negative test result indicates no antigens for COVID-19 were detected. If it is possible for this test to give a negative result that is incorrect (false negative) in some people with COVID-19. If you are concerned about your COVID-19 status after testing or think you may need follow up testing, please contact your healthcare provider.

For up-to-date information on COVID-19, please visit the CDC COVID-19 website:

**WARNINGS AND PRECAUTIONS**

This test is only intended for the detection of SARS-CoV-2, not for any other viruses or pathogens.

This product has been authorized only for the detection of proteins from SARS-CoV-2, not for any other viruses or pathogens.

This test is intended for diagnosis of coronaviral infection by detecting COVID-19 antigen but should not be used as a sole criterion for the determination of SARS-CoV-2 infection. Other laboratory tests and clinical information (signs and symptoms) should be used and considered for diagnosis.

- Do not use the COVID-19 Test Card if the pouch is damaged or if the seal is broken.
- Do not reuse any test component.
- To obtain a correct result, this test must be performed as indicated in the application (Health COVID-19 Antigen Rapid Test) and/or instructions for Use. Observe the COVID-19 Test Card and/or instructions for Use.
- Inadequate product package extraction may yield false test results.
- Do not use the tip of the swab before and after collecting the sample from the nostrils.
- Insert the swab into the tube right after taking the sample. Test samples immediately after collection, but no more than 4 hours after specimen collection before placement into extraction buffer or up to 2 hours after placement into extraction buffer. If kept at room temperature, be sure to read test result after 15 minutes. Do not read results after 30 minutes.
- Be sure to read test result within 15-30 minutes.
- Do not ingest extraction liquid.
- Keep test kit and components out of the reach of children and pets before and after use.
- Avoid contact with skin and eyes.
- The reagent in the extraction liquid contains ProClin® 300 which may cause an allergic skin reaction in some people. If the solution makes contact with the skin or eye, wash/flush with copious amounts of water. If skin irritation or rash occurs get medical advice/attention.
